Dashbook

Dashboards as Code

Define dashboards in YAML. Push to Git. Auto-deploy.

The Problem

BI tools require UI clicks to update dashboards
No version control, no code review, no CI/CD
Can't use AI assistants to maintain analytics

The Solution

Dashboards defined in simple YAML files
Full Git workflow: branch, PR, review, merge
AI-optimized schema for Claude Code / Copilot

Git-Native

Version control, PR previews, rollbacks. If it's not in Git, it doesn't exist.

AI-Ready

Schema designed for LLM generation. Tell Claude to update your dashboard.

Any Data Source

Snowflake, Databricks, BigQuery, Postgres, DuckDB —no dbt required.

How it works: 1 Edit YAML   →   2 Push to GitHub   →   3 CI validates   →   4 PR preview   →   5 Merge & deploy
